

AlkaChi™

Under Counter System

Clean and Green!

If your source water is derived from a healthy live stream or rainwater catchment system, total water purification through Reverse Osmosis may not be desirable. In these kinds of conditions, the right kind of filtration system is needed to manage natural and environmental contaminants in the water. This is exactly what the AlkaChi™ system is designed to do.

The AlkaChi™ offers the highest filtration employing a 17-stage system in five full components to achieve excellent filtration and reduce contaminants without flush water. Simple to operate, the AlkaChi™ is easily installed under the counter and features Water Revolution's solid brass delivery faucet, available in either a Polished Chrome (shiny) or Brushed Nickel (satiny) finish, and creates powerful energized water.

The AlkaChi™ unit measures 17" tall, 15" wide and 7" deep.

Each AlkaChi™ filter set will produce approximately 700 - 1,000 gallons of energized water. Depending on source water and amount of water processed, we suggest average use cartridge replacement every 6-12 months to assure excellent water quality.

Water-Revolution AlkaChi™ / \$745 USD
