

# Introducing...

Delicious energized, alkaline chilled water & ice cubes  
at your fridge door!

And it's affordable: Only **\$295**

The ALKACHILL™ creates delicious micro-clustered, alkaline antioxidant chilled water and ice on demand.

This affordable inline refrigerator system installs in minutes.

The ALKACHILL™ System can be installed in a variety of ways, but requires hook-up to a refrigerator that has a working automatic icemaker or working chilled water / ice dispenser at its door.

The ALKACHILL™ is an accessory flow-through design device and works best as a complement to a larger, more powerful Water-Revolution point-of-use system.

The ALKACHILL™ System measures approximately 15" long, 6" wide and 3-1/2" tall.

ALKACHILL™ cartridges should be replaced every 6 to 12 months to ensure excellent water quality.

(Ultimate product life depends on quality of source water and other issues including the amount of water processed).

See the ALKACHILL™ video on Facebook: [www.Facebook.com/WaterRevolution](http://www.Facebook.com/WaterRevolution)
