

ALKAPURITY™ H-D SYSTEM

Many of our clients are concerned about the overabundance of chemical and other unnatural contaminants in their drinking water. Much has been published concerning health challenges associated with “man made” and “disinfected” drinking water.

Water-Revolution’s Reverse Osmosis (RO) powered AlkaPurity™ H-D system was created to meet these contaminant challenges head on. Using a constant pressure, non-electric pump, the AlkaPurity™ H-D first purifies the water then allows our energized media solution™ to transform the finished water’s profile into alkaline, antioxidant, energized water!

The system comes complete with a beautiful dedicated faucet, in your choice of Polished Chrome (shiny), Brushed Nickel (satiny) or Oil-Rubbed Bronze finish, along with a 4.4 Gallon Water Storage Tank.

Other faucet finishes available by Special Order.

Only \$995

AlkaPurity™ H-D Unit Dimensions

- Main Unit: 18" Tall, 15" Wide, 7" Deep.
- 4.4 Gallon Tank: Diameter is 11"; Height is 14"
- 2.2 Gallon Tank: Diameter is 8"; Height is 13".
- The capacity of each tank is approximately half of what it is rated because the rest of the space in the tank is occupied by a pressurized membrane.
- Installed faucet is approximately 12" tall.
