

Transforms bottled water to delicious, hydrating water:

Alkalizing (up to 9 pH)

Antioxidant (up to -450 mV swing)

Energized

Micro-clustered

You simply place the AlkaWand in a bottle of purified water, and shake it up and down for 30 seconds. In 5-10 minutes, the water will be converted to micro-clustered, alkalizing, energized antioxidant water.

On average, each AlkaWand will last 4 months, using it twice a day, in a 16-oz. bottle of water. You can use an AlkaWand more than twice a day; it will not last as long then.

Before the first use, you should activate your AlkaWand by placing it in a clean bottle filled with 6" of water. Shake for 30 to 60 seconds. Discard water. You only need to do this once initially, to activate your AlkaWand.

When purchasing bottled water, we suggest using purified water, as the AlkaWand will convert the water to alkalized, energized antioxidant water, but it will NOT clean or filter the water in any manner.

Exposure to light, oxygen and heat diminish the health-promoting qualities of the AlkaWand's water.

We do not suggest that the AlkaWand be left in a bottle for longer than 12 hours at a time.

If the AlkaWand is used in bottle larger than 16 oz., more time may be required for the conversion.

You can store your AlkaWand in the case you purchased it in.

Test drops can be used to show the various pH values of our water, bottled water and other clear beverages. They should never be consumed.

SRP \$49.95 each, or \$54.95 with reagent drops for testing
